

What is claimed is:

[Claim 1] 1. A power switching module, comprising:

a plurality of connectors, disposed on a circuit board, for supplying power and transmitting signals, wherein said connectors comprises power sockets and signal sockets;
a power adaptor, disposed on the circuit board, electrically connected to said power sockets of said connectors; and
a signal adaptor, disposed on said circuit board, electrically connected to said signal sockets of said connectors.

[Claim 2] 2. The power switching module according to claim 1, wherein said power sockets of said connectors share a loop of said circuit board and are electrically connected to said power adaptor.

[Claim 3] 3. The power switching module according to claim 1, wherein said signal sockets of said connectors share a loop of said circuit board and are electrically connected to said signal adaptor.

[Claim 4] 4. The power switching module according to claim 1, wherein said signal sockets of said connectors comprises a SATA socket.

[Claim 5] 5. The power switching module according to claim 1, wherein said signal sockets of said connectors comprises an USB socket.

[Claim 6] 6. The power switching module according to claim 1, wherein said circuit board comprises power cords for electrically connecting to said power adaptor.

[Claim 7] 7. The power switching module according to claim 1, wherein said circuit board comprises a signal wire for electrically connecting to said signal adaptor.
